CLOUD CIX

Cloud for you.

CloudCIX is a multi-tenant, multi-region Cloud platform which orchestrates your compute, storage, networking and security needs, in a flexible, safe and cost effective manner.

The perfect Cloud for you.

Executive Summary

CloudCIX is the best way to build your Private Cloud infrastructure.

Cloud Computing has revolutionised the way organisations access and interact with their data and applications. But Public Cloud is not the solution in all cases. Data sovereignty is a major concern. Cost control can also be an issue due to variable pricing. The term 'Cloud Shock' has been coined to describe the experience of many companies, when costs unexpectedly ratchet up. Private Cloud solves data sovereignty and Cloud Shock issues.

Despite the security and cost advatages, many companies think that Private Cloud is not viable because of availability and cost of support. CloudCIX Private Cloud comes with full support. We configure, test, manage and support your infrastructure for a small monthly charge.

CloudCIX delivers all of the Private Cloud benefits you need with full support, high security and low costs.

Why Choose CloudCIX?

CloudCIX is based on simple, elegant, design principles utilising, for example, REST APIs and leveraging the capabilities of the Juniper SRX platform. This design focus makes CloudCIX secure, easy to install and upgrade, and easy to support.

The fully qualified technical engineers in our Network Operations Centre (NOC) monitor your Private Cloud on a twenty-four-hour, seven-day, basis. Leaving you secure in the knowledge your organisation's IT systems are in safe hands.

CloudCIX is built on Juniper SRX firewall technology. Our RoboSOC intelligent security system automates all of our security processes.

CLOUD CIX
Cloud for you.
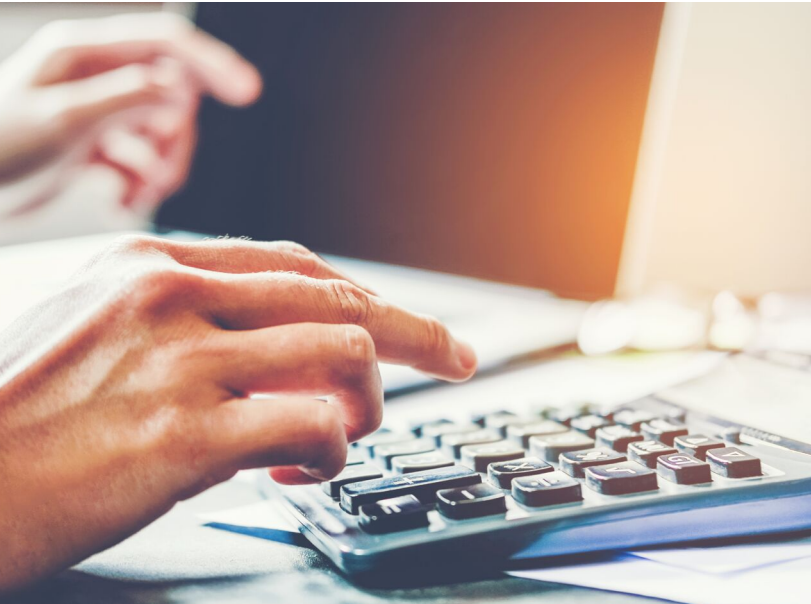

Benefits of CloudCIX for you.

Fully Supported

CloudCIX's Private Cloud solution moves your infrastructure to the data centre of your choice, where we will actively manage and protect your IT systems from outages and cyber threats.

Highly Secure

You will have your own private dedicated hardware resulting in your infrastructure being safe and secure at all times. Juniper SRXs managed by RoboSOC will keep an eye on everything, 24x7.

Cost Effective

CloudCIX has no unexpected costs and is significantly cheaper than Public Cloud. This means no nasty surprises in your bill, just a flat monthly fee based on your company's specific requirements.
